

ZECCHETTI

www.zecchetti.it

Zecchetti are one of our oldest suppliers, having worked with us for over 20 years, during which time we have installed over 25 major installations in the United States and over 50 in the United Kingdom primarily on pack and carton palletizers and complete turnkey lines for the production of PET bottles, where they are established as a world leader.

In more recent times, **Zecchetti** have diversified into automatic warehouse systems and are currently introducing a range of machines which are proving to be very popular in this fast growing area.

The Spazio Series is a range of automatic vertical magazines, manufactured on a modular structure a standard version can be as high as 14m. The system is primarily designed for the storage of smaller parts, using trays, which are moved on a 2 axis trolley system. Trays are automatically stored within the system and withdrawn on request, using a modern computer system. The machine is particularly useful for restricted spaces.

The UNICO Series differs from the Spazio because of its major flexibility, by using the same structure but providing the machine with a shuttle train motion system, we are able to supply systems for large quantities of products to store. This system has one or two operator stations [bays], which allows one single operator to access all of the stored goods. The system is expandable.

Finally the TRASLO Series is a large scale automatic warehouse system of the conventional type, operating at maximum height of 30m and maximum weight loads of 1200kg. The system has a unique lifting speed of 1.2m/second and a transfer speed of 3.5m/second, making it one of the fastest and most effective systems available.

Products:
Pack Palletizers, Container Depalletizers, Specialist PET Bottle Air Conveyor and Palletization Systems, Specialist Glass Manufacture Conveying and Palletization Systems and Automated Warehouses

TECNOVAC

www.tecnovac.com

Tecnovac are a medium size company, situated near Milan, who have specialised for many years in the production of machines for the sealing of trays with or without vacuum and gas.

The Athena – a true production machine, capable of up to 10 cycles per minute..

Ermetica M2 – hand operated tray sealer, ideal for small canteen and for R&D.

The Compact – a very popular machine, capable of up to 4 cycles per minute and ideal for semi-automatic operation on multiple trays depending upon their size. Available with both vacuum and gas flushing.

Products -
Automatic and semi automatic sealing machines for preformed trays

Tecnovac have been particularly successful because they offer a wide range of machines from hand operated single tray sealers through to sophisticated high speed automated lines, operating with vacuum or with vacuum and gas.

The most popular machines are shown below:

The Athena Double – capable of up to 10 cycles per minute and generally designed for larger food service type trays.

Ermetica M3 – a more sophisticated unit with reel feed but still hand operated and extremely flexible.

The Orion – capable of up to 14 cycles per minute for high production requirements.

If you send us a sample of your tray, together with your requirements in terms of speed, vacuum or gas, we would be pleased to quote.
